Barium titanate is an inorganic compound with chemical formula BaTiO_3 . Barium titanate appears white as a powder and is transparent when prepared as large crystals. It is a ferroelectric ceramic material that exhibits the photorefractive effect and piezoelectric properties. Barium titanate sputtering agents can be used in different areas. For example in specific electronic ceramics barium titanate films which can be obtained by sputtering targets can

be used. For the assembly of electronic devices such as detectors, capacitors and sensors, barium titanate can be used.
