Barrier coating for paper-based packaging refers to functional coating materials applied to paper or paperboard substrates to enhance resistance against moisture, grease, oxygen, aroma, and other external factors, thereby improving product protection, shelf life, and performance while often enabling recyclability or compostability as an alternative to plastic laminates.

The barrier coating for paper-based packaging industry chain starts upstream with suppliers of raw materials such as polymers, latex, bio-based chemicals, additives, and paper substrates, continues midstream with coating manufacturers and packaging converters that develop and apply barrier coatings onto paper and paperboard using specialized technologies, and extends downstream to brand owners, food and beverage companies, retailers, and foodservice providers, with additional contributions from equipment suppliers, R&D institutions, and recycling systems, while increasing environmental regulations and demand for sustainable packaging solutions drive innovation and collaboration across the entire value chain.

Globally, numerous projects are underway to expand capacity for barrier coatings for paper-based packaging, including new production lines for water-based and bio-based coatings in Europe and North America driven by sustainability regulations, investments in Asia-Pacific to support rapid growth in food packaging demand, upgrades of existing paper mills to integrate coating capabilities, collaborations between chemical companies and packaging converters to develop recyclable and compostable solutions, and pilot

projects focused on replacing plastic packaging with paper-based alternatives, with increasing support from governments and brand owners seeking to reduce plastic waste and improve circular economy outcomes.
