Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Barrier Coatings market.

The barrier coating ideally protects the base material by providing an impermeable barrier for moisture and corrosive substances.

A "coating" is a thin covering applied to the surface of a substrate for functional purposes, such as gas barrier function, adhesion, wettability, or corrosion resistance. Lacquers are coatings that are largely used in the packaging industry to improve the barrier properties of the plastic film substrate. Commonly used coatings act as barriers to oxygen, moisture/water vapor or CO₂ in order to prevent the penetration or loss of the specific gas. Other barrier functionalities are against UV, to protect the packaged content from light, or against volatile organics, to preserve aroma.
