Basalt fiber high temperature filter bags are industrial dust removal filter bags made of natural basalt, a type of inorganic fiber material resistant to ultra-high temperatures. They are characterized by high temperature resistance, high strength, and corrosion resistance, and are mainly used for high-temperature flue gas purification and dust removal in industries such as steel, metallurgy, and chemicals.

The filter bags use ultra-fine basalt fiber yarn as raw material for the warp, with major global suppliers including Kamenny Vek, Zhejiang GBF, and Basalt. Downstream applications primarily target the high-temperature flue gas filtration and dust control market, with end-users concentrated in industries such as metallurgy, cement, and chemicals.Global sales in 2024 were approximately 20 million units, with an average market price of approximately $6 per unit. Single-line production capacity varies depending on production processes and investment scale, but is approximately 1 million units per year. Industry gross profit margins range from 20% to 35%.
