Abstracts

The global Baseband Processor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A baseband processor (also known as baseband radio processor, BP, or BBP) is a device (a chip or part of a chip) in a network interface that manages all the radio functions (all functions that require an antenna).

The increasing demand for baseband processor drives the market. Factors such as increase in the internet usage and the growth of IoT will drive the demand for smartphones. Also, the entry of new vendors who offer smartphones at prices lower than that of the established vendors has resulted in the decrease in the average selling price of smartphones, which will result in the growth in their demand. Since mobile phone processors account for a major function in wireless devices such as smartphones, an increase in their demand will drive the growth of the market. APAC is estimated to dominate this market throughout the forecast period on account of the rising disposable income of the consumers, growing internet penetration, rapid urbanization.
