Basic life support skills can be effectively trained using simulators, also known as BLS training manikins. In a Basic Life Support course, students will learn how to assess for unresponsiveness, respiratory arrest, and/or pulses. Next, they will be trained to position the patient correctly and then perform CPR (cardiopulmonary resuscitation), chest compressions and ventilations (mouth-to-mouth and mouth-to-nose) at the correct rate and depth. High-quality CPR training uses defined parameters for compression depth and number, and provides direct feedback to students on their performance. Basic Life Support training simulators are available in age-appropriate sizes.
