The global Basket Blasting Machine market size is predicted to grow from US\$ 366 million in 2025 to US\$ 528 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

A drum blaster is a common type of blasting equipment used for surface cleaning and preparation. It uses sandblasting technology to spray abrasive particles to the surface of the workpiece at high speed, thereby removing dirt, oxides, coatings or old paint, etc., making the surface smooth and providing a good roughness. Basket blasting machines are commonly used in automotive manufacturing, ship repair, metal processing, construction industries, and more. With the advancement of automation technology, the future basket blasting machines may tend to be more automated and intelligent. Automation technology can improve production efficiency and reduce human input, while providing more stable and precise sandblasting results.
