BaSO₄ is a white crystalline solid that is odorless and insoluble in water. It occurs as the mineral barite, which is the main commercial source of barium and materials prepared from it. The white opaque appearance and its high density are exploited in its main applications.

Natural BaSO₄, also known as barite powder, is mainly used in wall coatings, commonly used in ordinary coatings. Its production technology determines the market price and is used in relatively strict coatings and coatings industries. Precipitated BaSO₄ is a product obtained after complex technology processing. Its content and whiteness are higher than that of natural type. It is used in papermaking, plastics, rubber, and advanced paints.
