Batch Distillation Unit is a separation device that operates in batches. It vaporizes the components in the mixture by heating, collects fractions with different boiling points in sections after condensation, and is suitable for the purification of small-scale, high value-added or multi-component products. Its core includes a distillation kettle, a condenser, a fractionation column and a receiving system. It is flexible in operation and can adjust the temperature, pressure and reflux ratio to optimize the separation effect. It is mainly used in fine chemicals, pharmaceuticals, essential oil extraction and laboratory research and development, especially for heat-sensitive substances or frequent material changes.
