A bathroom electric heated towel rail is a sanitary fixture designed to dry, preheat, and sterilize towels using electric heating technology. Employing heating elements such as carbon fiber filaments, alloy wires, or fluid-filled heating tubes, these units maintain a surface temperature of approximately 37°C and operate within a power range of 18 to 900 watts. They offer a multitude of functions—including drying, space heating, and dehumidification—thereby enhancing both bathroom comfort and towel hygiene.

The upstream sector of this industry primarily comprises suppliers of core components, such as carbon fiber and alloy heating wires, heating tubes, thermostats, aluminum alloy profiles, and surface treatment materials. The downstream sector encompasses various end-use environments—including private home bathrooms, hotels and guesthouses, gyms, and swimming pool facilities—where sales are realized through building material and sanitary ware distribution channels, e-commerce platforms, and project-based supply partnerships, thereby catering to the demand for comfortable sanitary environments among both end consumers and commercial clients. Globally, the average unit price for electric heated towel rails stands at \$80. The annual sales volume is approximately 1.82 million units, against a global production capacity of 2 million units, with the industry maintaining a profit margin of 12%.
