The global Battery Additives market size is predicted to grow from US\$ 1264 million in 2025 to US\$ 1722 million in 2031; it is expected to grow at a CAGR of 5.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Battery additives are components that enhance the performance of the batteries and improve their service life. Additionally, they enhance a battery's charge holding capacity too. Battery additives have numerous applications and can mainly be categorized into lead acid and lithium-ion types. The global battery additives market is expected to grow exponentially in the forecast period owing to the recent developments in the market.

The growing demand for Li-ion batteries in consumer electronics, high adoption of HEV, PHEV, and EV in the automotive industry, and the increasing investments in renewable energy are factors fueling the growth of the market. However, underdeveloped support infrastructure for EVs is a major restraint for market growth.
