The global Battery Electrolyte Salt LiFSI market size is predicted to grow from US\$ 205 million in 2025 to US\$ 1175 million in 2032; it is expected to grow at a CAGR of 28.8% from 2026 to 2032.

LiFSI is a high-performance lithium salt used as an electrolyte solute in lithium-ion batteries. It serves as an alternative or supplement to the traditional LiPF₆ (lithium hexafluorophosphate). LiFSI typically appears as a white crystalline solid and is known for its superior thermal stability, excellent ionic conductivity, wide electrochemical stability window, and strong compatibility with high-voltage cathodes and silicon-based anodes. It also exhibits lower gas generation, reduced corrosion to aluminum current collectors, and enhanced performance at both low and high temperatures. Due to these properties, LiFSI is particularly suitable for next-generation high-energy-density batteries, fast-charging systems, and solid-state battery applications.

LiFSI is a next-generation high-performance electrolyte lithium salt, increasingly used in advanced lithium-ion batteries and solid-state battery systems. Compared with traditional LiPF₆, LiFSI offers superior thermal stability, wider electrochemical windows, and improved compatibility with high-voltage cathodes and silicon-based anodes, making it ideal for power batteries (EVs), high-performance consumer electronics, and energy storage systems (ESS). The demand is rapidly rising due to the electrification of transportation and the pursuit of longer battery life cycles and fast-charging capabilities. Major consumption markets include China, South Korea, Japan, Europe, and North America, with China leading in both production and application deployment.
