Battery energy storage fuse is an overcurrent protection device designed for energy storage systems such as lithium-ion batteries and sodium-sulfur batteries. It can quickly fuse in the event of a short circuit or overload to prevent thermal runaway from causing fire or explosion. Its core features are high breaking capacity (up to 100kA), low internal resistance (reduced energy loss) and precise fusing characteristics (response time in milliseconds). It also needs to adapt to a wide temperature range (-40?~125?) and frequent charge and discharge cycles. It is widely used in grid-level energy storage power stations, household energy storage and electric vehicle battery replacement systems.

United States market for Battery Energy Storage Fuse is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
