The research report highlights the growth potential of the global Battery Energy Storage Systems for Smart Grid market. Battery Energy Storage Systems for Smart Grid are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Battery Energy Storage Systems for Smart Grid. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Battery Energy Storage Systems for Smart Grid market.

Owing to the growing consumption of power across the globe, there is a greater need for energy storage as distributed generation. Distributed generation produces power close to the areas where it is consumed so that the distance is reduced, resulting in less transmission and distribution losses. Distributed Energy Resources (DER) will be increasingly used to meet the future electricity demands for residential and industrial customers, utilities and commercial customers. The growing requirement to mitigate the power transmission and distribution losses will propel the demand for distributed generation during the forecast period.

Due to the rapid development of the wind power and photovoltaic industry, as well as the increasing awareness of environmental protection in various countries, the energy storage industry is becoming one of the key technologies, which is used in many countries to advance the carbon neutral target process today. The United States, China and Japan occupied the leading position in the installed capacity of energy storage projects, among which the United States is the world's largest energy storage market. The European Union established the European Battery Alliance (EBA) in 2017, aiming to escape the EU's dependence on Asian manufacturers in the battery storage field. According to Data Europa's statistics, the cumulative installed capacity has reached 48.38GW in 2020. At present, pumped storage accounts for 94% of the energy storage market in Europe, with Spain and Germany having the largest capacity. According to BNEF data, electrochemical energy storage in the United States added 3.97GW / 10.88 GWh in 2021. In terms of power, it accounted for 40% of the global increase. In 2022, the United States passed the IRA, which subsidized independent energy storage for the first time. Under the ITC, new energy storage projects could offset up to 60% of the investment. The effect of the policy has initially appeared, and the energy storage industry in the United States shows an upward trend.
