The global Battery Explosion-proof High and Low Temperature Test Box market size is predicted to grow from US\$ 14140 million in 2025 to US\$ 16730 million in 2032; it is expected to grow at a CAGR of 2.5% from 2026 to 2032.

The battery test constant temperature and humidity test chamber provides a controllable environment for the battery by precisely controlling the temperature and humidity inside the chamber to simulate the performance and life of the battery under different temperature and humidity conditions. Its main purpose is to test the stability, reliability and safety of the battery under various extreme conditions to ensure that the performance of the battery in actual use meets the standards.

With the improvement of battery performance and the improvement of safety standards, battery explosion-proof high and low temperature test chambers need to continuously upgrade technology to meet more stringent testing requirements and higher safety standards. For example, more advanced temperature control systems, explosion-proof technologies, and data acquisition systems are used. In the future, battery explosion-proof high and low temperature test chambers may be more intelligent, integrating advanced sensors, data acquisition and analysis systems to achieve more accurate and efficient testing and data analysis. At the same time, intelligent control systems can be used to achieve functions such as remote monitoring and automatic temperature adjustment to improve test efficiency and accuracy.
