The global Battery Grade Lithium Dihydrogen Phosphate market size is predicted to grow from US\$ 1154 million in 2025 to US\$ 2620 million in 2032; it is expected to grow at a CAGR of 11.2% from 2026 to 2032.

Battery Grade Lithium Dihydrogen Phosphate is a high-purity lithium phosphate compound, generally represented by the chemical formula LiH_2PO_4 . It is produced through controlled reactions between lithium-containing raw materials and phosphoric acid or phosphate systems. Compared with industrial-grade lithium dihydrogen phosphate, battery-grade material requires stricter control over purity, metallic impurities, moisture, particle size distribution, solubility, and batch-to-batch consistency.

In the lithium battery supply chain, battery grade lithium dihydrogen phosphate is mainly used as a lithium source and phosphate source for the production of lithium iron phosphate (LFP) cathode materials. In certain LFP synthesis processes, it can react with iron sources and carbon sources through mixing, drying, calcination, and carbon coating processes to form cathode materials with stable crystal structure and good electrochemical performance.

In 2025, the global sales of battery grade lithium dihydrogen phosphate are expected to reach 200,000 tons, with an average price of USD 5,900 per ton and an industry gross profit margin of approximately 15%.

LFP batteries are gaining market share due to their safety, long cycle life, lower cost, and reduced dependence on nickel and cobalt. As automakers increasingly use LFP batteries in mass-market EVs, commercial vehicles, and energy storage systems, demand for upstream LFP raw materials such as battery grade lithium dihydrogen

phosphate is expected to expand. The global LFP battery market is already sizeable and is projected to grow rapidly from 2025 to 2034.

China has strong advantages in LFP cathode production, lithium salt refining, phosphate chemistry, process engineering, and cost control. Europe, North America, and Southeast Asia are promoting battery supply chain localization, but they still face gaps in cost competitiveness, production scale, technical experience, and raw material integration. As a result, China is expected to remain the main production and consumption center for battery grade lithium dihydrogen phosphate in the near term.
