## Abstracts

The global Battery Grade Metal Foil market size is predicted to grow from US\$ 244 million in 2025 to US\$ 390 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Battery Grade Metal Foil refers to a metal foil material with high purity, small thickness, good surface quality, and high dimensional accuracy. It is mainly used to manufacture cathode materials and current collectors for lithium-ion batteries. Common battery-grade metal foil materials include aluminum foil, copper foil and nickel foil.

In order to improve the energy density and reduce the size of lithium-ion batteries, the thinner and lighter Battery Grade Metal Foil is the future development trend. Thinner metal foils can reduce the weight and volume of batteries, thereby increasing the range of electric vehicles and the energy storage density of energy storage devices.
