The global Battery Grade PVDF market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

PVDF, or polyvinylidene fluoride, serves as a vital component in electric vehicle (EV) battery technology, primarily functioning as a binder material for the electrodes and a coating for separators. Its exceptional thermal stability, chemical resistance, and compatibility with electrolytes contribute to the durability, safety, and performance of lithium-ion batteries used in EVs. By ensuring strong adhesion of active materials and enhancing separator properties, PVDF enables higher energy density, improved cycling stability, and prolonged lifespan of EV batteries, thus facilitating the transition to sustainable transportation.
