The global Battery High Temperature Pyrolysis Furnace market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The high temperature cracking technology of lithium batteries requires the use of an oxygen-free cracking furnace (also called a high temperature pyrolysis furnace). The gas in this high temperature cracking furnace is protected by inert gas. The high temperature anaerobic pyrolysis technology performs anaerobic pyrolysis on the organic matter of waste lithium-ion batteries. The pyrolysis of the material in the pyrolysis furnace is an external heating roasting. The heat source does not contact the solid material. It is an indirect heating in a closed system to ensure that the pyrolysis gas does not leak out. The pyrolysis conditions are 450-600° in an inert gas atmosphere.

United States market for Battery High Temperature Pyrolysis Furnace is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
