The global Battery Life Prediction Software market size is predicted to grow from US\$ 205 million in 2025 to US\$ 388 million in 2032; it is expected to grow at a CAGR of 8.6% from 2026 to 2032.

Battery Life Prediction Software refers to analytical and simulation platforms designed to predict the remaining useful life (RUL) and degradation patterns of lithium-ion batteries in electric vehicles. These systems leverage real-time battery management system (BMS) data, electrochemical models, machine learning algorithms, and cloud computing to forecast performance, optimize maintenance schedules, and enhance battery safety and reliability. They are used by EV OEMs, battery manufacturers, fleet operators, and energy storage companies. The gross profit margin of major companies in the industry is between 60%-80%.

The battery life prediction software market is a niche segment within EV battery management and intelligent maintenance. Growth is mainly driven by the increase in EV adoption, higher battery energy density, and the need for fleet operational efficiency. The software leverages real-time BMS data and electrochemical models to forecast battery degradation and remaining useful life (RUL), providing OEMs, battery manufacturers, and fleet operators with optimized maintenance schedules, performance improvement, and safety alerts. Technology trends include machine learning-based life prediction algorithms, cloud-based big data analytics, model calibration, and self-learning capabilities to address the variability of battery chemistries, operating environments, and usage patterns. Additionally, with the growing need for second-life battery utilization and recycling, life prediction software plays an increasing role in evaluating second-life value and developing battery lifespan extension strategies. Overall, this market is high-margin, data-driven, with a concentrated customer base,

and growth closely linked to EV installed base and battery capacity expansion.
