## Abstracts

According to this study, the global Battery Lifecycle Management Software market size will reach US\$ 1304 million by 2031.

Battery Lifecycle Management Software refers to specialized software solutions designed to monitor, manage, and optimize the entire lifecycle of batteries—from manufacturing and deployment to usage, health monitoring, repurposing, and recycling. These platforms integrate data from Battery Management Systems (BMS), telematics, and IoT sensors to track parameters such as State of Health (SoH), State of Charge (SoC), depth of discharge, charge cycles, temperature, voltage, and degradation patterns. Advanced features often include predictive analytics, digital twins, warranty validation, end-of-life optimization, regulatory compliance tracking, and integration with energy storage and EV fleet systems. This software plays a crucial role in improving battery performance, extending lifespan, minimizing downtime, and ensuring safe second-life or recycling pathways in sectors like electric vehicles (EVs), grid energy storage, consumer electronics, and industrial power systems.

Battery Lifecycle Management Software monitors a wide range of parameters to optimize battery performance, safety, and longevity across applications such as EVs, grid storage, and industrial systems. Key metrics include State of Charge (SoC), State of Health (SoH), depth of discharge (DoD), cycle count, internal resistance, voltage, current flow, and capacity fade. It also tracks thermal conditions (cell temperature, thermal runaway indicators), fault events (overvoltage, short circuit), and usage patterns (charging history, geolocation, energy throughput). Advanced analytics provide estimates for remaining useful life (RUL), second-life viability, and recyclability, enabling predictive maintenance, warranty management, and end-of-life decision-making.
