The main function of a battery operated smoke detector is to signal the primary fire alarm system in a large building or residential complex. The only difference between a conventional smoke detector and battery operated smoke detector is the power supply in the global market. Smoke detectors in which batteries are used as the sole operator are included in the battery operated smoke detectors category. Battery operated smoke detectors have a lifespan of 5 to 10 years. They become inactive only after the total exhaustion of the battery. These battery operated smoke detectors run on 9V batteries and lithium ion batteries, whereas smoke detectors that are hard-wired to the any electrical system use batteries to provide backup power in case a fire knocks out and are known as semi-wired battery operated smoke detectors.
