There is a dynamic electrochemical reaction inside the lithium-ion battery, which is more sensitive to moisture and oxygen. The organic solvent in the cell, such as the electrolyte, when encountering water and oxygen, will quickly react with the lithium salt in the electrolyte to generate a large amount of HF, affecting the electrochemical performance of the cell (such as capacity, cycle life).

The meaning and purpose of the packaging of soft-pack lithium-ion batteries is to use high-barrier flexible packaging materials to completely isolate the inside of the cell from the outside, so that the inside is in a vacuum, oxygen-free, and water-free environment.
