The global Battery Passport Management Software market size is predicted to grow from US\$ 149 million in 2025 to US\$ 237 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

Battery passport management software is a digital lifecycle compliance and supply-chain transparency platform for batteries. It is usually delivered as SaaS or enterprise software and enables battery manufacturers, automakers, energy-storage integrators, material suppliers and recyclers to collect, verify and share key data covering mineral origin, material processing, cell production, module and pack assembly, in-use performance and end-of-life treatment. Its value is not limited to data entry; it provides an auditable digital identity for each battery and connects regulatory reporting, carbon-footprint disclosure, due diligence and circularity data into a continuously updated compliance infrastructure. The battery passport management software market is currently in a developmental stage, with the industry's overall software gross margin standing at approximately 60%-80%. The value chain of battery passport management software starts with cloud infrastructure, blockchain or trusted-data technologies, carbon-accounting models, supply-chain APIs and regulatory data models, moves through platform developers and system integrators, and ends with battery material suppliers, cell manufacturers, automakers, energy-storage companies, recyclers and compliance users.

The main growth driver for battery passport management software is the regulatory shift toward lifecycle transparency, carbon-footprint disclosure, recycled-content reporting and supply-chain due diligence under the EU Battery Regulation. Battery and energy-storage supply chains are highly cross-border and multi-tiered, making spreadsheets, generic ERP modules and manual audits insufficient for traceable, verifiable and

continuously updated compliance data. As automakers and battery manufacturers increasingly make digital compliance a supplier qualification requirement, battery passport software is evolving from a regulatory response tool into a supply-chain data infrastructure for market access, second-life use and closed-loop recycling.
