The global Battery Performance Calorimeter market size is predicted to grow from US$ 108 million in 2025 to US$ 158 million in 2031; it is expected to grow at a CAGR of 6.6% from 2025 to 2031.

Battery performance calorimeter is mainly used to measure the heat changes generated by the battery during the charging and discharging process to evaluate the thermal behavior and safety of the battery. It is usually used to test high-performance batteries such as lithium batteries, especially in industries such as electric vehicles, energy storage devices, and consumer electronics.

There have been many incidents in which battery failure has caused fires, with the news reporting catastrophic results in some instances. Decomposition reactions in batteries' electrolytes and electrodes generate heat, accelerating these reactions and resulting in potentially dangerous thermal runaways.

To avoid the risk of thermal runaway and the resulting catastrophic consequences, it is critical to determine the safe operating limits of battery cells, modules and packs. Therefore, the battery cells need to be subjected to mechanical, electrical and thermal stresses to determine their safe operating limits.

With the rapid development of the electric vehicle market, the safety and efficiency of battery performance have become particularly important. Battery calorimeters can help analyze the thermal management performance of batteries and prevent safety issues such as overheating. In addition, with the application of renewable energy and the

development of energy storage technology, the demand for high-performance batteries in energy storage systems is also growing. Battery calorimeters are used in these systems to ensure the stability of batteries under high-load working conditions.

Although battery performance calorimeters bring many benefits to battery R&D, their equipment costs are high, which may limit the purchasing power of small companies or laboratories.

High-precision battery calorimeters require professional operation and data analysis capabilities, so the training and maintenance costs of related technicians are also high.

The battery performance calorimeter market is growing rapidly, driven by the rapid development of industries such as electric vehicles, energy storage systems, and consumer electronics. Despite challenges such as equipment cost and technical complexity, the demand for battery calorimeters remains strong as the market's requirements for battery safety and performance increase. In the future, with the advancement of technology and the reduction of costs, this market is expected to usher in a broader development space.
