The global Battery Powered Electromagnetic Flow Meters market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A battery-powered electromagnetic flowmeter is a device that uses the Faraday electromagnetic induction principle to measure the flow velocity and flow rate of a fluid. It measures the flow rate by inducing electromotive force in the fluid and then converts it into a flow value. Since it uses a battery as a power source, it can work normally even without an external power supply. It is particularly suitable for outdoor, mine, oil field and other occasions where wiring is not convenient.
