The global Battery-powered LoRaWAN GPS Tracker market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Battery-powered LoRaWAN GPS tracker is a device that uses a Global Positioning System (GPS) receiver to determine its location and LoRaWAN technology to transmit that location data wirelessly over long distances to a LoRaWAN network server. LoRaWAN is a low-power, wide-area network (LPWAN) technology that enables long-range wireless communication with low power consumption. This makes it an ideal technology for battery-powered GPS trackers, which need to transmit location data regularly without draining the battery quickly.

The global market for Battery-powered LoRaWAN GPS Trackers has been experiencing significant growth, driven by the increasing demand for asset tracking, location-based services, and remote monitoring in various industries. These trackers combine the benefits of low-power, long-range communication (LoRaWAN) and GPS technology to provide real-time tracking and location information for valuable assets, vehicles, and equipment. The United States and Canada have a well-established market for GPS trackers, driven by the need for efficient fleet management, asset tracking, and supply chain optimization. European countries are adopting GPS trackers to enhance logistics, transportation, and smart city initiatives. Stringent regulations related to asset tracking and safety also contribute to the demand. Rapid urbanization, industrial growth, and increasing trade activities in countries like China and India have led to the adoption of GPS trackers for efficient supply chain management and asset tracking. The market for Battery-powered LoRaWAN GPS Trackers is poised for continued growth as industries increasingly recognize the benefits of real-time asset tracking, location-based services,

and remote monitoring. Advancements in battery technology, LoRaWAN connectivity, and GPS accuracy are expected to further enhance the capabilities of these trackers. Additionally, the integration of other sensor data (e.g., temperature, humidity) and the development of advanced analytics and predictive maintenance solutions could expand the use cases for battery-powered LoRaWAN GPS trackers in various industries. As the world becomes more connected and data-driven, the demand for efficient and reliable asset tracking solutions is likely to remain strong.
