Battery-powered trains are a new type of rail transit vehicle that relies mainly on large-capacity battery packs for power. These battery packs are usually installed at the bottom of the train or inside the carriage, and the electric motors convert electrical energy into mechanical energy to drive the train forward. Battery-powered trains do not produce exhaust emissions and are environmentally friendly. They can significantly reduce air pollution and greenhouse gas emissions, help improve urban air quality and address climate change. Battery-powered trains are quieter when running, providing passengers with a quieter and more comfortable riding environment. This is especially important for urban rail transit, which can reduce noise interference to surrounding residents.
