Battery separator microporous membrane is a polymer functional material with nano-scale microporous structure, mainly used in lithium-ion batteries. Its main function is to isolate the positive and negative poles of the battery to prevent the two poles from directly contacting each other and causing short circuits, while allowing lithium ions to migrate smoothly during the charging and discharging process. The performance parameters of the microporous membrane, such as pore structure, thickness, pore size distribution, etc., directly affect the capacity, cycle life and safety of the battery.
