The global Battery Spot Welder Strip market size is predicted to grow from US\$ 670 million in 2025 to US\$ 1162 million in 2032; it is expected to grow at a CAGR of 8.5% from 2026 to 2032.

Battery spot welding tape is a conductive metal strip used to connect battery cells via resistance spot welding. Common materials include nickel tape, nickel-plated steel tape, and copper alloy tape. This product ensures that battery packs have good conductivity, mechanical strength, and thermal stability, and is widely used in consumer electronics, power tools, energy storage systems, and new energy vehicle battery packs. The battery spot welding tape industry chain includes upstream nickel, steel, copper, and alloy additives, involving rolling and surface treatment processes; midstream manufacturing encompasses precision rolling, slitting, plating, thickness control, and quality inspection; downstream applications are mainly concentrated in the lithium battery assembly field, including consumer electronics, electric vehicles, energy storage systems, and industrial batteries. Supporting services include material customization, welding performance testing, and logistics supply support. In 2025, the global production of battery spot welding tape was approximately 357 million meters, with a global average market price of approximately US\$1.93 per meter. The gross profit margin of major companies in the industry is between 20% and 35%. In 2025, the global production capacity of battery spot welding tape was approximately 475 million meters.

The Battery Spot Welder Strip market is driven by rapid growth in lithium-ion battery production for electric vehicles, energy storage systems, and consumer electronics. Reliable conductivity and welding consistency are critical performance requirements. Demand is increasing for thinner, high-strength, and low-resistance materials to improve battery energy density and safety. As battery pack automation expands, standardized

and high-quality welding strips gain importance. Long-term growth is supported by global electrification trends and continuous expansion of battery manufacturing capacity.
