The global Battery Welding Monitoring System market size is predicted to grow from US$ 1049 million in 2025 to US$ 1609 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2024, global battery welding monitoring system production reached approximately 250,000 units, with an average global market price of around US$4,000 per unit. A battery welding monitoring system is a critical device used for real-time monitoring and control of welding quality during lithium battery manufacturing. It primarily uses visual, ultrasonic, and X-ray inspection techniques to perform non-destructive testing on the welds between the battery tabs and the battery housing, ensuring the integrity, strength, and consistency of the welds, thereby improving battery safety and reliability. Such systems are widely used in new energy vehicles, energy storage systems, and portable electronics. The upstream supply chain for battery welding monitoring systems primarily includes suppliers of core components such as visual sensors, X-ray generators, and ultrasonic probes, as well as developers of artificial intelligence algorithms and software. The midstream supply chain comprises specialized manufacturers engaged in system integration, software development, equipment manufacturing, and solution provision. The downstream supply chain is widely used in new energy vehicle power battery manufacturing, energy storage battery pack production, and consumer electronics battery production lines.

United States market for Battery Welding Monitoring System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
