Protein concentration determination kit is a reagent combination used to quickly and accurately determine the protein content in a solution, often based on the principle of colorimetry, such as BCA method, Bradford method, Lowry method, etc. The kit usually contains standard protein, colorimetric reagent and buffer. When used, the color change is produced by the reaction between protein and reagent, and the absorbance value is measured by a spectrophotometer, and the protein concentration in the sample is obtained by comparison with the standard curve. It is widely used in biochemistry and molecular biology experiments.
