The global Beam Viewing Card market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

When working with laser beams in non-visible spectral regions (i.e., with infrared light or ultraviolet light), it is often essential to have some way of making beam positions and beam profiles visible. A low-cost way of doing this is using beam viewing card, also called infrared sensor cards or detector cards. Such a tool – often made of a plastic (e.g. polyester) with the size of a credit card or larger – has a photosensitive area which emits visible light (or in some cases changes its color) when it is hit by laser light in a certain wavelength region. It therefore becomes possible e.g. to follow the path of a laser beam and to check whether it hits optical components at the desired positions.

United States market for Beam Viewing Card is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Beam Viewing Card is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Beam Viewing Card is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Global key Beam Viewing Card players cover AZURE Photonics, HC Photonics, Altos Photonics, Data Optics, Edmund Optics, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2024.
