Propolis is a resinous substance collected from the buds of certain trees by bees and used as a cement or sealant in the construction of their hives.

The raw and unprocessed propolis commonly consists of roughly 55 percent resinous compounds and balsam, 30 percent beeswax, 10 percent ethereal and aromatic oils, and 5 percent bee pollen. Its constituents and color, ranging from golden brown to reddish to almost black, depends on the tree source of collection, the most common being dark brown. Propolis is sticky at and above room temperature, 20 °C (68 °F). At lower temperatures, it becomes hard and very brittle.
