Abstracts

The global Beer Gas market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Beer Gas, also known as carbon dioxide (CO₂), is a colorless, odorless gas commonly used in the brewing and bottling process of beer. It is injected into the beer to create a fizzy, carbonated beverage. CO₂ serves several purposes in beer: it helps dissolve natural flavors, extends the shelf life by preventing oxidation, and provides a pleasant mouthfeel and crispness.

The industry trend of Beer Gas is closely tied to the growth of the global beer market. As demand for craft beers and other flavored beverages increases, so does the demand for Beer Gas. The industry is also shifting towards more sustainable and environmentally friendly solutions, such as using recycled CO₂ for brewing.
