The beer production fermentation tank is a special container used in the beer fermentation process. It is usually made of stainless steel and has good sealing and temperature control capabilities. In beer brewing, yeast converts maltose into alcohol and carbon dioxide in the fermentation tank, which is an important link in determining the flavor, alcohol content and taste of beer. Fermentation tanks are widely used in industrial brewing and can be divided into two categories: primary fermentation tanks and post-fermentation tanks, which are used in different stages of the fermentation process.
