Beer raw material processing equipment is a series of mechanical equipment used in the early stages of beer brewing to pre-treat the main raw materials such as barley, malt, hops, etc. These equipment include but are not limited to grinders (for crushing malt), gelatinizers (for cooking auxiliary materials such as corn or rice), mixers (for mixing the crushed malt with water evenly) and conveying systems. Through this series of processing steps, it is ensured that the raw materials can efficiently release starch and other fermentable substances, prepare for the subsequent saccharification process, and thus ensure the quality and efficiency of beer brewing.
