Beinaglutide API is the active pharmaceutical ingredient of the recombinant human GLP-1(7–36) peptide drug (Beinaglutide) used for glycemic control and weight management; as an API it is a GMP-grade peptide substance produced by peptide synthesis or recombinant expression, purified by chromatographic and filtration steps, and supplied under cold-chain conditions to downstream formulators. Typical upstream inputs for Beinaglutide API include protected amino acids and reagents for solid-phase peptide synthesis (or cell culture media and raw materials when produced recombinantly), coupling agents, organic solvents, chromatographic resins and buffers, and GMP utilities; downstream activity includes sterile formulation (vials, pre-filled pens/cartridges), fill-finish, secondary packaging, distribution to hospitals/pharmacies and clinical/commercial use.

A single production line for benaglutide API has a production capacity of approximately 200-500 kg, with a gross profit margin of approximately 20%-30%.
