Bellows sealed angle valve usually refers to angle valve with bellows structure. The characteristic of this valve is that it adopts the design of bellows, and combines the bellows with the angle valve body to form a new type of valve product. The bellows structure can make the valve have certain elasticity and corrosion resistance, and can also absorb the thermal expansion or contraction in the pipeline system to ensure the normal operation of the pipeline system. The angular valve body can realize the flow

control and cutoff of the pipeline system. Therefore, shaped bellows angle valve combines the advantages of bellows and angle valve, has good performance and reliability, and is widely used in pipeline systems in chemical, pharmaceutical, food and other industries.
