A belt-driven spindle, often referred to as a belt drive spindle, is a mechanical component used in various machinery and equipment, particularly in manufacturing and machining processes. It is a type of rotary device designed to rotate a tool, such as a cutting tool or grinding wheel, at a specific speed and with precision. The spindle is connected to a power source through a system of belts and pulleys, which transmit rotational motion to achieve the desired tool speed.

Ongoing efforts to design more efficient belt and pulley systems, minimizing energy losses during power transmission to increase overall spindle efficiency.
