A belt sling is a belt device used when lifting loads with a crane or hoist. The word 'sling' means a lifting cable, and there are three main types of materials: wire rope, fiber belt, and chain. Among these, slings using fiber belts are collectively called belt slings. Compared to chains and wire ropes, the belt sling is lightweight, and the fibers themselves are soft. As such, they are less likely to damage cargo.

The main use of belt slings is to wrap luggage while lifting and unloading. The maximum weight of each type of belt sling is determined by the width and material of the belt.
