One of the central features of AI development is the various software frameworks that make it possible. We are starting to see significant rationalization of frameworks; however, it is unlikely a de-facto framework will emerge, given the many AI use cases such a framework would need to cater for. TensorFlow is gaining momentum in terms of developer use, but the framework is not optimized to support all use cases and work over any hardware technology. As a result, if not implemented well, the framework could induce huge performance issues.
