The global Benchtop Hot Air Sterilizers market size is predicted to grow from US$ 123 million in 2025 to US$ 146 million in 2031; it is expected to grow at a CAGR of 3.0% from 2025 to 2031.

Benchtop Hot Air Sterilizer is a benchtop design, back heating, horizontal force convection with adjustable air speed to ensure chamber temperature uniformity. This is utilized for the effects of poisoning caused by oxidation of microorganisms, denaturizing of protein and concentration of electrolyte under high temperature and dry heat, chiefly to destroy the cell protoplasm through oxidation and thus to kill microorganisms within a certain heating time.

Hot air sterilization is one method of effectively killing microbes of all kinds, especially bacteria, viruses and molds on heat-resistant materials. Contamination control during the incubation of cell cultures in a CO? incubator is of the greatest importance.
