Tunable laser sources, also known as tunable lasers, are optical devices capable of emitting laser light at different wavelengths within a specific range. Unlike fixed-wavelength lasers, tunable lasers allow for adjustment or tuning of the emitted wavelength. This tunability is a valuable feature in various applications where flexibility in choosing the laser wavelength is essential. Tunable lasers can emit light at different wavelengths within a specified range. The tuning can be continuous or discrete, depending on the design and intended application. Tunable lasers can cover a broad range of wavelengths, typically from the ultraviolet (UV) to the infrared (IR) regions of the electromagnetic spectrum. Tuning mechanisms can vary and may include tuning elements such as gratings, prisms, filters, acousto-optic devices, or etalons. Tunable lasers find applications in various fields, including Industrial Application, optical coherence tomography (OCT), fiber-optic communication, sensing, Scientific & Research, material characterization, and quantum optics.

The global Benchtop Tunable Laser Sources market size is projected to grow from US\$ 455 million in 2024 to US\$ 604 million in 2030; it is expected to grow at a CAGR of 4.8% from 2024 to 2030.
