Benign prostatic hyperplasia (BPH) is a urological disorder characterized by non-cancerous proliferation of prostate gland cells. This condition causes the gland to enlarge and, as a result, press against the urethra, constricting urine flow. This disorder is associated with aging, hormone imbalances, and abnormal cell growth.

This is attributed to rising geriatric population, increased awareness for prostate cancer and other urological disorders. However, the factors such as dearth of urologist in developing economies and lack of awareness

regarding various urological diseases can hinder the growth of the market in the coming years. North America is account for the largest share of the benign prostatic hyperplasia market in 2016 due to high prevalence rate of benign prostatic hyperplasia.
