The global Benzhydrol market size is predicted to grow from US\$ 211 million in 2025 to US\$ 340 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Benzhydro is a representative aromatic diaryl secondary alcohol and fine chemical product, with CAS No. 91-01-0 and molecular formula C₁₃H₁₂O. Structurally, it consists of two phenyl rings attached to the same hydroxyl-bearing methanol carbon, giving it a benzhydryl skeleton and an active hydroxyl functional group. The product is generally supplied as white to off-white crystals, powder or solid, and commercial grades commonly include industrial grade, pharmaceutical grade and reagent grade, with delivery forms ranging from small packages and drums to ton-scale supply. Benzhydrol is usually produced from benzophenone through sodium borohydride reduction, catalytic hydrogenation or other reduction processes. Key technical requirements include reaction selectivity, impurity control, residual solvent control, color, moisture and product stability. Its functional value comes from the hydrophobicity and steric effect of the benzhydryl structure, as well as the reactivity of the hydroxyl group, allowing further etherification, esterification, oxidation, substitution and other organic synthesis reactions. As an intermediate, it is mainly used in pharmaceuticals, fine chemicals, fragrances and flavors, agrochemicals, and other research or custom synthesis scenarios, serving as an important basic intermediate between upstream aromatic ketone feedstocks and downstream high-value chemicals.

Benzhydrol market development opportunities are mainly driven by the continuous growth of pharmaceutical intermediates, fine chemicals, and fragrances. Increasing demand for high-purity and stable intermediates in drug synthesis, along with diversified applications in fine chemicals and agrochemical intermediates, provides new growth potential. Advances in technology and process optimization reduce production costs and improve product quality, enabling manufacturers to expand capacity and market presence. The growth of custom synthesis and contract manufacturing allows

companies to quickly meet specialized customer requirements, enhancing competitiveness and further opening market opportunities. Market challenges and risks include raw material price volatility, complex production processes, and stringent environmental and safety regulations. The production involves aromatic compounds and reduction reactions, requiring strict control of impurities and residues while complying with safety and environmental standards, which increases operational costs and technical barriers. Intensifying market competition pressures small and medium suppliers with potential overcapacity and price constraints, while differences in international regulations add export and compliance risks. Downstream demand trends show increasing need for high-purity, high-value, and customized products. The pharmaceutical sector continues to invest in active intermediates, and the fine chemical and fragrance industries require stability and batch consistency, driving Benzhydrol products toward higher purity and varied specifications. Meanwhile, growth in research and custom synthesis drives manufacturers to provide diverse packaging and flexible delivery options to meet the needs of customers at different scales.
