Beta Agonist Feed Additive is a type of synthetic compound that mimics some of the effects of naturally-occurring substances by binding to beta-receptors on the surface of cells within the muscle, fat, and other tissues of animals. Beta Agonist Feed Additive is used to enhance lean muscle gain, increase growth rate, and improve feed efficiency in livestock, especially before slaughtering. There are two main types of Beta Agonist Feed Additive: ractopamine and zilpaterol, which are approved by the FDA for use in swine, turkeys, and cattle.

According to our Fee Research Center, in 2022, global total production of feed was about 1.2 billion tons. Key producing regions are Asia, Europe and North America, top ten countries hold about 65% of global feed production. China, United States, Brazil and India, as the top four countries, accounted for half of the total feed production.
