The global Beta Pinene market size is predicted to grow from US\$ 190 million in 2025 to US\$ 234 million in 2031; it is expected to grow at a CAGR of 3.5% from 2025 to 2031.

Beta-Pinene ( $\beta$ -pinene) is a monoterpene, an organic compound found in plants. It is one of the two isomers of pinene, the other being  $\alpha$ -pinene. It is colorless liquid soluble in alcohol, but not water. It has a woody-green pine-like smell.

As consumers become more health-conscious and environmentally aware, the demand for natural and plant-based ingredients in personal care, cosmetics, and food products has surged. Beta-Pinene, with its fresh, pine-like aroma, is a key ingredient in the production of fragrances for perfumes, air fresheners, and cleaning products. The shift away from synthetic chemicals to natural alternatives is driving significant demand in the flavor and fragrance industries.

Beta-Pinene has demonstrated anti-inflammatory, antimicrobial, and bronchodilator properties, making it a valuable component in pharmaceuticals. It is used in treatments for respiratory conditions, such as asthma and bronchitis, and has applications in anti-inflammatory medications. As interest in plant-based medicines and natural remedies grows, the demand for Beta-Pinene in therapeutic applications continues to rise.
