Beta thalassemia is a condition in which the production of hemoglobin reduces. Hemoglobin is the iron-containing protein in red blood cells that carries oxygen to cells throughout the body. Risk factors associated with thalassemia are family history and ancestry. The types of beta thalassemia depends on the severity. Beta thalassemia minor is also called beta thalassemia trait. People with beta thalassemia minor may have mild anemia; however, people with beta thalassemia intermedia have moderately severe anemia. People with Cooley's anemia, also called beta thalassemia major, experience severe symptoms and life-threatening anemia.
