According to our LPI (LP Information) latest study, the global Beverage Containers market size was valued at US\$ 51580 million in 2023. With growing demand in downstream market, the Beverage Containers is forecast to a readjusted size of US\$ 63920 million by 2030 with a CAGR of 3.1% during review period.

The research report highlights the growth potential of the global Beverage Containers market. Beverage Containers are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Beverage Containers. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Beverage Containers market.

Metal containers, the second leading beverage container type in unit terms due to widespread use in the sizable soft drink and beer markets, will register minimal growth as a result of declining soft drink and beer production. However, good prospects are expected in fast-growing beverages such as energy drinks and eight-ounce soft drink cans. Demand for aluminum bottles will increase rapidly from a low base due to their upscale appearance, which provides a key element of product differentiation. Glass container demand will expand modestly, helped by the entrenched position of bottles in wine packaging and robust gains in markets such as RTD tea and other nonalcoholic RTD beverages, where glass' premium image continues to be a marketing advantage. Demographic trends, particularly above-average growth in the 55 and over population, an important wine cohort, will also aid glass container demand. Declining demand for paperboard containers will stem from continued supplantation of gabletop cartons by plastic bottles and aseptic cartons by pouches. However, healthy growth for soymilk,

which utilizes a significant amount of paperboard containers, will boost demand. Additionally, bag-in-box wine containers will see robust gains based on their convenience and ongoing efforts to improve their image.

Flourishing demand for alternatives to the carbonated drinks along with increasing consumer preferences for single serving containers is expected to drive beverage containers market growth over the forecast period. In addition, these containers also assist in minimizing post production damage which is further expected to fuel the industry demand. However, the industry is likely to gain its potential due to intense expansion of the energy and specialty drinks industry along with product innovations such as shaped and vented cans. In addition, inroads by cans in the craft beer market are estimated to support the beverage container market demand. Robust increase in demand for aluminium bottles can be subjected to the upscale appearance as well as product differentiation offered in beer industry. Asia Pacific beverage containers market size accumulated around 34% of the overall industry share in 2014. The surge in the industry is due to increasing demand for glass bottles from beer industry in the region over the forecast period.
